

FUNCTIONAL TRAINER

SH-G7221

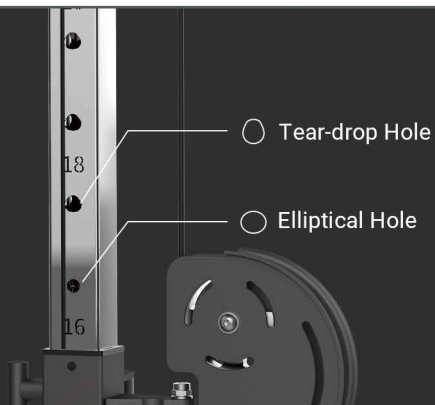

Ergonomic European Design with Height Upgrade

To better meet the needs of international markets, the SH-G6820M has been upgraded to a total height of 238cm—15cm higher than the previous version. This ensures sufficient workout space for taller users, delivering enhanced comfort and training experience.

Inclusive User-Friendly Features

Equipped with integrated footrests and additional upright handles, the trainer supports pull-up functions and makes training convenient for users of different heights.

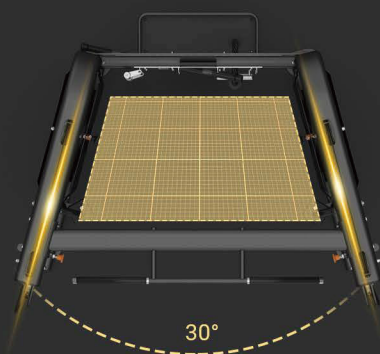

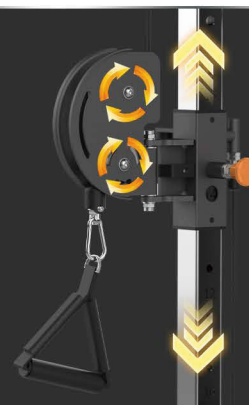

Water-Drop Hole Design

All adjustment holes above 140cm adopt a water-drop design, while others remain oval. The larger surface area of the water-drop holes enhances smoothness and safety when adjusting to higher positions, preventing instability or misalignment.

Smooth & Precise Cable System

Enhanced pulley mechanics deliver exceptionally smooth cable travel and accurate resistance ratios, enabling versatile training movements and a refined workout experience.

Space-Optimized Design

Reduced outward column angles create a larger internal training zone, improving comfort and enriching crossover and functional training options.

Integrated Storage System

The trainer features two rows of inner hooks with 12 storage points for accessories of various sizes. An optional rear storage tray allows convenient placement of resistance bands and small items, maximizing the unit's organization and functionality.

Comprehensive Accessory Package

Supplied with 5 versatile attachments (2 single handles, triceps rope, straight bar, curl bar, and V-handle), enabling immediate full-body training without additional purchases.
